Purpose-Built Boats With Better Performance

EBDG has long-standing expertise with the design of Specialty Oilfield Vessels. We work with owners from the start of the design to tailor a vessel that best suits specific needs and mission requirements.

Our Specialty Oilfield Vessels allow operators to have purpose-built boats with better performance, and we incorporate the latest technologies into our designs to benefit crew safety and ship operations while at sea.

In 2013 we partnered with a Gulf of Mexico Operator on the class design and production engineering for a variant of our EB-210. The design, developed from concept to production in our Gulf Coast office, features an innovative tank farm unique to Specialty Design Oilfield Vessels.

Not only did EBDG provide the client with full design services including structural, mechanical, piping and outfitting design, but we served as primary point of contact for all regulatory body requests for information.

Our Oilfield Vessels Experience

EB220CC PSV

Client: Gulf of Mexico Operator

115m Well Stimulation Vessel

Client: Oil & Natural Gas Co. of India

185' Lightering Support Vessel

Client: AET

376' MPSV

Client: Reliance Industries

300' Well Stimulation Vessel

Client: Baker Hughes
